

Elevate Energy Facility Operations

Specialized facility solutions for the
Power Generation industry

Between infrastructure investments, innovations in grid interactivity, climate change, and new regulations, this is an era of change for power generation companies.

At the center of it all is your facility. At ABM, we put decades of expertise to work to help you reach your goals for your buildings and your business.

Meet diversity spend requirements

We understand how much you value working with suppliers that reflect the diversity of your local communities. Through our established supplier diversity program, we partner with small and underrepresented business enterprises as suppliers or subcontractors.

Achieve sustainability targets

Reaching your sustainability goals requires a comprehensive approach. ABM incorporates sustainability in everything we do, from green cleaning to water-wise landscaping.

Reduce costs

Our labor pool can perform critical facility functions at lower hourly rates than firms that specialize in skilled labor. As one of the largest buyers of facility service supplies, we leverage our purchasing power to negotiate lower costs, so we can pass off the savings to our clients.

Consolidate facility solutions

We offer a full range of facility solutions to streamline and coordinate operations seamlessly. With service strategies and facility teams working in lockstep, it's easier to achieve your complex goals.

Power better performance

OUR SOLUTIONS

- Janitorial/housekeeping
- Vital area cleaning
- Decontamination
- General labor
