

Enhancing Your Energy Strategy: Electrification Meets *ABM Performance Solutions*

ABM *Performance Solutions* now offers electrification as part of our fully integrated facility services model—enhancing your ability to reduce energy costs and improve system resilience. Whether you're exploring EV infrastructure, microgrids, or on-site renewable energy, this evolving capability supports your long-term performance strategy—helping you build a smarter, cleaner, and more efficient operation.

Unlike traditional integrated facility services—that juggle outsourced vendors and disconnected teams—ABM *Performance Solutions* unites all facility services and strategic support into one seamless, outcomes-driven partnership.

Tailored to meet the diverse needs of your facility, ABM *Performance Solutions* delivers measurable results through a combination of deep technical expertise and industry-leading service capabilities—all under a single contract.

Electrification Services

EV CHARGING SOLUTIONS

ABM can help power your fleet's future with a scalable EV charging solution built for efficiency and cost savings. From site assessment to smart charging and renewable integration, we deliver end-to-end infrastructure that reduces downtime and optimizes energy use.

MICROGRIDS & POWER STORAGE

To ensure energy resilience, ABM designs, implements, and manages sustainable and resilient microgrid systems. These systems are critical for facilities that need onsite, uninterrupted power generation for multiple applications.

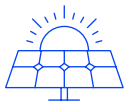

ELECTRICAL ENGINEERING & TECHNICAL SERVICES

ABM engineers and NETA-certified technicians provide comprehensive design, operations, maintenance, and repair services for electrical systems—from UPS and battery systems to commercial and industrial fleet environments. We also design, operate, and service EV charging equipment through our 24/7/365 Network Operation Center (NOC) to ensure long-term reliability and performance.

UPS & BATTERY MAINTENANCE

Regular maintenance of uninterruptible power supplies and battery systems is crucial to prevent data loss and ensure continuous operation. ABM delivers comprehensive and proactive care, supporting everything from emergency lighting and building automation to data centers and life-safety systems.

WEATHER RESISTANCE

ABM designs and implements solar, energy storage, and on-site generator systems to help businesses operate independently from the grid. From high-wind-rated switchgear and flood-resistant power enclosures to weatherproof EV charging systems, ABM ensures your critical infrastructure can endure even the toughest weather conditions.

Ready for What's Next

As energy demands evolve, ABM is ready to help you take the next step. By integrating electrification into our proven ABM *Performance Solutions* IFS model, we're not just solving today's challenges—we're literally building the infrastructure for tomorrow.
