

# The complete semiconductor ecosystem

## PERFORMANCE FOR EVERY PHASE

ABM delivers staffing, technology, and compliance expertise so operations work seamlessly from day one.

### Construction

Precise protocol management and contamination-free cleanup at every build phase maintain cleanroom standards and support production timelines.

### Smart Start-Up

Tool coordination and performance are verified under controlled conditions, ensuring no disruption to surrounding assets.

### Operations & Maintenance

Controlled environments remain efficient, compliant, and ready for production with condition-based support.

### Specialty & Utility Support

High standards and strict protocols are maintained so teams can focus on throughput and output.

### Sustainability & Asset Management

Solutions for HVAC and energy use help reduce OpEx and extend asset lifecycles to meet long-term goals.
